ProTecht™

Smart Ways to Care for Your Kit

Extended 3 Year Warranty :: Environmental Monitoring :: Dust Filtering

Our aim is to provide you with everything you need to create the perfect environment for your servers, network kit and other ICT gear. Below are three ProTECHt™ options for you to choose from.
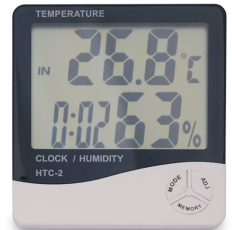

Three Year Warranty

All our racks are covered by a standard 1 year warranty. However if you want to extend that sense of reassurance, we can provide an exclusive three year warranty from as little as £39.95 - great value for money!

Acousti Products Temperature & Environment Monitor

At £24.95 the Acousti Products temperature and environment monitor offers great plug & play functionality at a fraction of the price of other environmental monitors.

- reads temperature in two different locations, so you can measure temperature gradients within the rack
- humidity level display
- time display
- readings are displayed in real time
- large easy to read LCD
- compatible with all racks supplied by Acousti

Dust Filters

Over time, dust build up can dramatically shorten the life span of rack equipment, servers and components. Using dust filters helps guard against these problems;

- dust can act as insulation, preventing heat sinks and processors from optimal heat transfer
- dust can clog airways
- dust can settle on fan bearings and blades - decreasing fan speed and airflow, and increasing noise
- in extreme cases dust can cause a build up of heat resulting in crashes and damage to the PCB boards

If you wish to purchase any of these ProTECHt™ products please let us know as soon possible after delivery. We can apply the 3 year warranty retrospectively, provided you let us know within 30 days of receiving your rack.
